

# INSTALLATION DETAILS

## **General Instructions**

1. Check material received against the packing list. Check the number of packages received and then check the contents of each package.
2. Check the material received for damage. If damage has occurred, secure a “damage notation” from the carrier
3. Identify each part as it is unpacked and put like parts together as close as possible to the working area where they are to be assembled.
4. Be careful to use the correct hardware as specified in the assembly instructions.

## **CAUTION**

In the interest of safety, all lockers must be securely anchored to the floor and/or wall. For safety, handle all components carefully and wear work gloves when assembling lockers. Install all units plumb and tighten all hardware securely. Retain instructions for future reference.

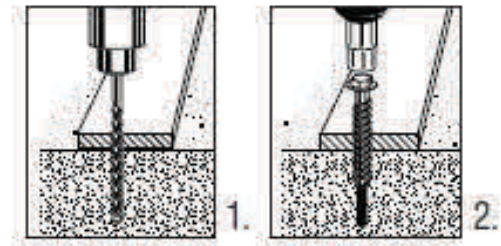

## **GUARDRAIL FLOOR ANCHORING INSTRUCTIONS**

### **Hardware Needed:**

- 5/8" X 4" Self Threading Anchor for Concrete
- 1/2" Carbide Drill Bit
- Wrench or Impact Wrench

### **Installation Steps for Concrete, Lightweight Concrete and Metal Deck:**

1. Using the 1/2" carbide drill bit, drill a hole at least 1" deeper than anchor embedment.
2. Using an impact wrench or manual socket wrench, insert anchor into hole and tighten anchor until fully seated. If installation torque exceeds 50 ft. lbs. using an impact wrench, remove anchor from hole. Reinstall with a new anchor using a manual socket wrench.

### **Caution:**

Observe torque values particularly when installing anchor in higher compressive strength concrete with and impact wrench. Over-torqueing may result in lower tension and/or shear performance of the anchor.

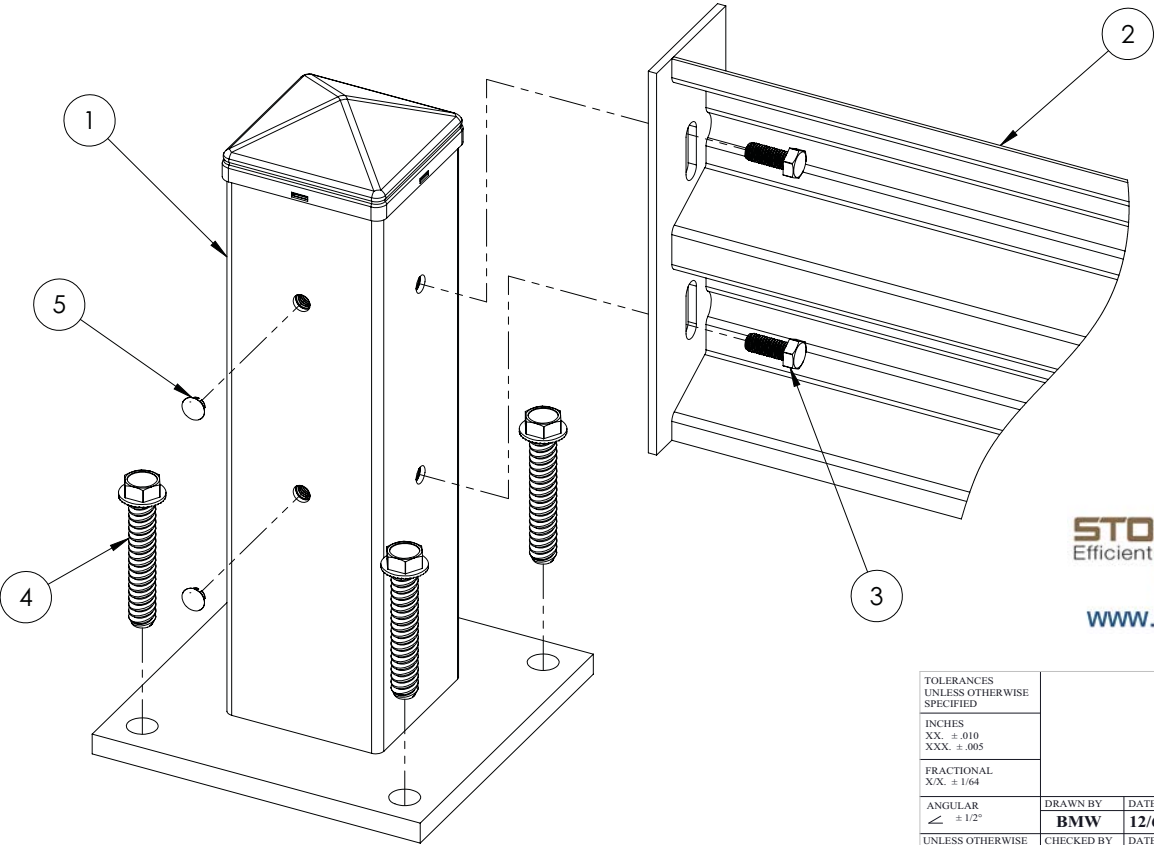

Use of core drills is not recommended to drill holes with this anchor.

Not recommended with use in new concrete which has not had sufficient time to cure.

Carbide drill bits are recommended for the installation of this anchor.

NOTES:  
1) USE PHC100 AT ALL UNUSED LOCATIONS
