Overhead Conveyors for Inmate Property Storage

Inmate Property Storage Conveyors

Inmate Property Storage for Correctional Facilities

Inmate property storage systems are an important and mandatory requirement of all Correctional Institutions in North America.

PACLINE's automated garment handling conveyor provides an efficient and highly economical storage and retrieval system for inmate property.

The PACLINE garment conveyor system is compact and versatile, making it easy to install in virtually any space.

It can be floor mounted or ceiling supported and installed to utilize the overhead space, leaving the floor clear or on multi levels to double the capacity for storage.

Key features of the PACLINE conveyor for inmate property storage systems in detention centers:

- Bolt together, modular track design means installation and modifications are quick and easy – no welding is required.
- Developed for industrial use, all Pacline equipment is highly durable to ensure years of trouble free operation.
- The RETRIEVER™ automated storage and retrieval system allows operators to retrieve multiple indexed bags.
- System can be designed to accommodate all types of garment bags.
- Operator safety is essential for Inmate Property Storage Systems. The PAC-LINE™ enclosed track design eliminates dangerous pinch points common in other conveyor designs.
