## SOUTHWEST SOLUTIONS GROUP

BUILT RIGHT IN.

The Southwest Solutions patient server is designed to put 80% of the most frequently used supplies for patient care 10 steps from the bedside.

This lets you:

- Build a decentralized nurse station right into each patient's room equipping nurses to spend less time "hunting and gathering" and more time caring for patients.
- Reduce traffic though the patient room by stocking supplies from outside the room – minimizing patient exposure and interruptions.
- Optimize floor plan and patient-room design, yielding more usable space – maximizing cost-per-square foot.
